Converting Systems Announces Rebuilding Loaner Program for Winders and Bag Machines

Keep Production Line Running While Refurbishing Older Machines

Schaumburg, IL – January 13, 2015 – Converting Systems Inc., a leader in the design, manufacturing and refurbishing of plastics machinery, is excited to announce the launch of its new machine Rebuilding Loaner Program. CSI has been rebuilding older machines for over 20 years. This new program improves the process by providing a way for customers to refurbish their dated plastics equipment without disrupting the output of their production line.

While plastics machinery is designed and built for longevity, technology continues to advance causing these machines to become dated. CSI rebuilds older machines to run faster and operate more safely and efficiently. Customers can take advantage of these innovations without incurring the expense of purchasing brand new machinery.

“We see a lot of very old bag machines still running with dirty, leaky hydraulic systems,” said Jim Kulasik, Quality Control and Process Manager. “We will completely refurbish older equipment with a new electronic Servo system and bring it up to today’s standards complete with touchscreen operation and a full warranty.”

With its new Rebuilding Loaner Program for Dual Turret winders and bag machines, CSI takes this concept a step further. Once a customer decides to rebuild one or more of their dated winders or bag machines, CSI will deliver a loaner to take the place of the machine that is currently being refurbished. Now customers experience only a minimal disruption in the production line since the only downtime occurs while installing the loaner machine into the line.

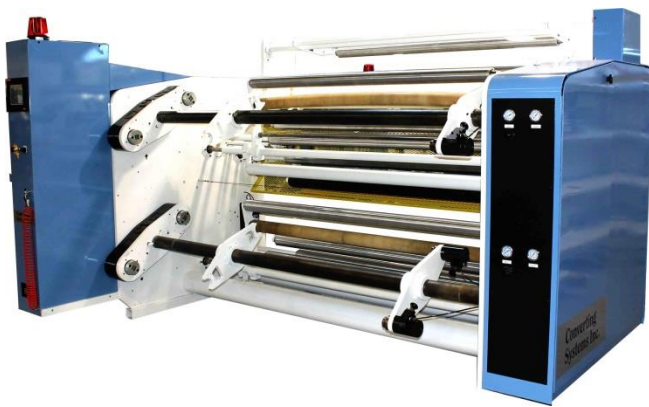

“Many customers have a large number of machines on their floor that are 30, 40, even 50 years old,” said Bill Engelhardt, General Manager. “When it’s not in the budget to buy new, many are looking for ways to refurbish their older equipment without taking the line down. Our loaner program provides them with an easy, viable solution. It’s amazing the difference a refurbished machine can make in expanding their production capabilities.”

Converting Systems continues to redefine the plastics industry by developing new ways to help customers make the most out of their current equipment. To learn more about CSI’s new Rebuilding Loaner Program, visit www.ConvertingSystems.com or call 847-519-0232.

About Converting Systems Inc.

Converting Systems Inc. is a leader in the design, manufacturing and rebuilding of Winders/Unwinders, Plastic Bag Machines, Coreless Winders and Separators for customers in Blown/Cast Film, Packaging, Converting, Printing and Steel industries. Its replacement parts division, CSI-Parts, provides OEM replacement parts and custom fabricated parts to support all types and brands of plastics machinery. Visit CSI at the NPE2015 Show in Orlando, Florida, March 23-27, South Hall, Booth #21093. For more information, visit us at www.ConvertingSystems.com or www.CSI-Parts.com or call 847.519.0232.
